

MUHAMMAD AHMAD KHAN

IT Operations Engineer | Telecom Network & Cloud Platform Operations | Cyber Security

Islamabad, Pakistan | +92 314 8296 838 | muhammadahmadkhan028@gmail.com | <https://www.linkedin.com/in/ahmad-khan-redteam/>

PROFESSIONAL SUMMARY

IT Operations Engineer with hands-on experience keeping mission-critical production systems live and stable inside Jazz (VEON), Pakistan's leading telecom operator. Built a track record of catching problems before subscribers do — monitoring cloud-native workloads on Red Hat OpenShift, safeguarding API/integration health through WSO2, and cutting incident resolution time through deep log forensics in the ELK Stack. Comfortable owning an incident end-to-end: triage, root cause analysis, fix, and the runbook that stops it happening again.

Brings a Cyber Security foundation (BS, Air University) into every operational decision — VAPT, risk frameworks, and secure-by-default thinking are second nature, not an afterthought. Builds automation and dashboards that turn manual monitoring into self-reporting systems, and works fluidly across NOC, DevOps, QA, and Infrastructure to keep enterprise and subscriber-facing services running. Targeting Network Operations, Site Reliability Engineering (SRE), and Telecom IT Operations roles where uptime, security, and speed all matter at once.

CORE COMPETENCIES

▶ Production & Network Operations	▶ OpenShift Container Platform	▶ WSO2 API & Integration Monitoring
▶ ELK Stack (Elastic, Logstash, Kibana)	▶ Incident Management & RCA	▶ Cloudflare (DNS / Security / Traffic)
▶ SQL & Database Operations	▶ VAPT & Vulnerability Management	▶ Risk & Security Frameworks
▶ Linux Administration	▶ REST API Troubleshooting	▶ Monitoring & Alerting Automation

PROFESSIONAL EXPERIENCE

IT Operations Engineer	May 2026 – Present
<i>Jazz (VEON) — Pakistan's Leading Telecom & Digital Services Operator Islamabad, Pakistan</i>	
- Monitor and support production applications and enterprise telecom services against strict high-availability and SLA requirements, minimizing service disruption for subscriber-facing platforms. - Administer and troubleshoot containerized workloads on Red Hat OpenShift Container Platform, ensuring pod health, deployment stability, and resource optimization. - Monitor WSO2 API and integration services to safeguard platform reliability across critical telecom application interfaces. - Perform deep log analysis and production troubleshooting using Elasticsearch, Kibana, and the ELK Stack, accelerating mean-time-to-resolution (MTTR) on service incidents. - Execute and validate SQL queries to support database operations, data integrity checks, and operational reporting.	

- Manage DNS configuration, security posture, and traffic optimization through Cloudflare for enterprise-grade platform resilience.
- Lead root cause analysis (RCA) investigations on production incidents, documenting findings and driving preventive action with cross-functional teams.
- Partner with Development, DevOps, QA, and Infrastructure teams to resolve incidents and continuously harden production environments.
- Build and maintain operational runbooks, dashboards, and monitoring reports to improve visibility and response readiness.

Technologies: OpenShift • WSO2 • ELK Stack • Elasticsearch • Kibana • SQL • Linux • Cloudflare • REST APIs • Monitoring & Alerting

Supply Chain Specialist – Operations

June 2025 – May 2026

ibex. Global | Islamabad, Pakistan

- Processed product warranty and customer claims while maintaining full compliance with company policy and service standards.
- Coordinated cross-departmentally to resolve warranty and supply chain issues efficiently, reducing turnaround time.
- Managed operational documentation and maintained accurate, audit-ready records.
- Ensured service quality while consistently meeting departmental KPIs and turnaround-time targets.
- Improved customer satisfaction scores through timely, first-contact issue resolution.

Cyber Security Analyst

Sept 2024 – April 2025

- Conducted Vulnerability Assessment and Penetration Testing (VAPT) across enterprise systems and applications.
- Supported incident response and security event investigations, contributing to faster containment and resolution.
- Performed security risk assessments and recommended practical mitigation strategies to reduce exposure.
- Applied Cyber Security and Risk Management Frameworks to align controls with organizational risk appetite.
- Identified vulnerabilities and documented clear, actionable remediation recommendations for stakeholders.
- Contributed to security documentation and compliance reporting to support audit readiness.

KEY PROJECTS

Jazz Sign-In Operations Monitoring Dashboard

Technologies: OpenShift, Python, ELK Stack, Kibana, SQL, HTML

- Designed and built an operational dashboard for real-time monitoring of production telecom services.
- Automated infrastructure metric collection from OpenShift, cutting manual monitoring effort significantly.
- Delivered service health reports and visual dashboards tracking CPU, memory, pod health, deployment status, and application availability.

Blockchain-Based Secure Log Management System — Final Year Project

Technologies: Blockchain, Python, Cryptography

- Architected a blockchain-based system for secure, tamper-evident log storage.
- Implemented hash verification to detect unauthorized log modifications, improving auditability and trust.

Centralized Log Analysis Platform

Technologies: ELK Stack, Linux

- Built a centralized logging solution using Elasticsearch and Kibana with configured visualization dashboards.
- Created alerting rules for abnormal application behavior, improving troubleshooting speed and operational visibility.

ARP Spoofing & Network Traffic Analyzer

Technologies: Python, Scapy

- Developed an educational ARP spoofing and traffic analysis tool for controlled lab environments to demonstrate MITM techniques and mitigation.

Vulnerability Assessment Automation

Technologies: Python, Linux

- Built automation scripts to streamline vulnerability assessment workflows and generate structured security reports.

TECHNICAL SKILLS

Cloud & Containers: Red Hat OpenShift · Cloudflare · Container Orchestration Fundamentals

Monitoring & Observability: ELK Stack (Elasticsearch, Logstash, Kibana) · Log Analysis · Performance Monitoring · Incident Management · Root Cause Analysis (RCA)

Cyber Security: VAPT · Incident Handling · Risk Assessment & Management · Security Auditing · Network Security · SIEM Fundamentals · Risk Management Frameworks

Databases: MySQL · SQL Query Optimization · Database Monitoring

Networking & Telecom: TCP/IP · DNS · HTTP/HTTPS · API Troubleshooting · Enterprise/Telecom Production Support

Operating Systems: Linux · Windows

Programming & Scripting: Python · Bash · SQL · PHP (Basic)

DevOps & Automation: Git · Docker (Fundamentals) · CI/CD Concepts · REST APIs · Operational Automation

EDUCATION

Bachelor of Science (BS), Cyber Security

Air University — Pakistan

CERTIFICATIONS

Udemy: Cyber Security Fundamentals · Ethical Hacking Essentials · Linux for Cyber Security · Python for Cyber Security

Coursera: Google Cybersecurity Professional Certificate · Foundations of Cybersecurity · Introduction to Network Security · Cybersecurity Risk Management
